SKILL SUMMARY

- **Programming Languages** : Java , PHP, JavaScript
- **Frontend Technologies** : HTML, CSS , Bootstrap, ReactJs
- **Backend** : Servlets , JSP , Spring Boot , Microservices , REST API's
- **Data Base** : MySQL, JDBC, Hibernate
- **Architecture** : MVC Architecture , RESTful services
- **Tools & Others** : Eclipse , VS Code, Git, GitHub

WORK EXPERIENCE

IScientific Techsolutions Labs Pvt.Ltd

May 2023 – Present

Role : Junior Software Engineer (Full Stack Developer)

- Hands-on experience in full-stack development using **Java, PHP, JavaScript, React.js, HTML, CSS, and Bootstrap**.
- Built responsive web interfaces and dynamic UIs using **React.js** and **Bootstrap** for modern web applications.
- Developed backend services using **Java (Servlets, JSP, Spring Boot, REST APIs)** and **PHP**, following **MVC architecture**.
- Worked with **MySQL, JDBC**, and **Hibernate** for efficient data storage and retrieval.
- Proficient with tools like **Eclipse, VS Code, Git**, and **GitHub** for development and version control.

KEY PROJECTS

Centralized Control Monitoring System (CCMS) – Web Application

- Developed a web-based dashboard for centralized control and real-time monitoring of multiple systems.
- Implemented dynamic visualization of live system data using frontend technologies.
- Built backend functionalities for data management and system operations using PHP and MySQL.
- **Technologies:** HTML, CSS, Bootstrap, JavaScript, PHP, MySQL.

Sesola Energy Company Website

- Created a complete website using HTML, CSS, Bootstrap, JavaScript, PHP, and MySQL.
- Designed a responsive and interactive user interface.
- Integrated a dynamic backend using PHP and deployed it online.
- Website link: <https://sesolaenergy.com>

Water Management System– Web Application

- Implemented real-time monitoring of multiple water tanks with capacity visualization and automated status indicators.
- Developed a remote pump and valve control system with ON/OFF functionality and live status tracking.
- Integrated flow rate measurement and water consumption tracking to optimize usage and efficiency.
- Added monitoring of electrical parameters (voltage, current, power) for pump health and performance analysis.
- Enabled historical data reporting with advanced filtering, search capabilities, and priority-based operation management.
- **Technologies:** React.js, Java, MySQL, HTML, CSS, Bootstrap, Git, GitHub

Live Motor Control and Monitoring System – Web Application

- Designed and implemented a centralized dashboard for monitoring and controlling **6 motors** and **6 valves** across **10 platforms** at Secunderabad Railway Station.
- Enabled real-time visibility of motor modes (**Automatic/Manual**), along with **inlet and outlet pressure** readings for operational efficiency.
- Integrated monitoring of key **electrical parameters** (voltage, current, power) and provided control over valve operations to manage water distribution effectively.
- Developed an **alerting system** and **historical data reporting** module to support diagnostics, performance tracking, and fault analysis.
- **Technologies:** React.js, Java, MySQL, HTML, CSS, Bootstrap, Git, GitHub, MQTT Protocol

EDUCATION

GMR Institute of Technology

Rajam, AP.

B.Tech (ECE) : CGPA : 7.84

2019 - 2023

CERTIFICATIONS

- **Power BI Workshop Certification** – Successfully completed a workshop focused on Power BI, covering data visualization, dashboard creation, and data analysis.
- **Introduction to Python – Udemy** – Completed an online course on Python fundamentals, including basic syntax, data structures, and introductory programming concepts.
